Challenge faced in designing functional Side

- ❑ First challenges were to change the mind set of various stakeholders like C & F Agent, Shipping agent, Freight Forwarders etc.
- ❑ Internal lower level customs personnel were also afraid of new Technology.
- ❑ Sometimes our large stakeholders like BGMEA, BKMEA their preparation for automation was not very prompt.
- ❑ NBR has gradually given training to the stakeholders new ASYCUDA system and they feel confidence on it.
- ❑ By this way NBR faces the challenges in designing the functional side.

How is the valuation and selectivity deal in AW:

- ❑ For valuation NBR follows WCO data model and also WTO valuation rules.
- ❑ To make ASYCUDA database more effective, NBR is going to apply the TSC (Tariff Specific Code) for important HSCode like car, Textile fabrics, Glassware, Machinery parts etc.
- ❑ NBR has established a separate Valuation and Audit Commissionrate.
- ❑ For selectivity NBR has selected different criteria like HSCode, Importer, Exporter, Country of Origin, C & F agent etc.
- ❑ In ASYCUDA System NBR has listed some risky items (HSCode), Defaulter Importers, Exporters and C & F agents.
- ❑ In field level offices use the above list as selectivity parameters.
- ❑ Field office also apply their own judgments in selectivity module.
- ❑ NBR has introduced risk management unit at NBR to handle the selectivity issues properly.
